## National Water Insecurity in Tunisia

## Gallup World Poll, Northwestern

 University, \& others have partnered to estimate experiences with water access and use around the world. So far, we have nationally representative estimates of water insecurity for half of the world's population. In Tunisia, respondents were selected using probability-based sampling with poststratification weights to ensure the 1,006 respondents were representative of the Tunisian population $\geq 15$ years of age in 2020.
## $\mathbf{2 2 . 9} \%$ of Tunisian adults experienced moderate-to-high water insecurity in $2020^{1}$

## Who is water insecure in Tunisia?

*Based on degree of urbanisation classification, rural and peri-urban areas were combined.

## Within household income quintiles

How did we measure water insecurity?
Most indicators measure water availability or infrastructure. These don't tell us about people's ability to reliably access or use water or how water insecurity varies by gender, age, etc. Which means we haven't known exactly who is left behind... until now.

## How does water insecurity manifest in

Tunisia? We used the Individual Water InSecurity Experiences (IWISE) Scale ${ }^{1,2}$ to measure individual experiences with water access and use. Respondents had the following negative experiences due to water problems in the last year.

These data provide insights on prevalence and severity of water insecurity that can guide policymaking, including resource allocation. The IWISE Scale can also be used to measure the impact of interventions, and monitor progress and accountability. We are seeking resources to generate these vital, actionable water insecurity data again in all countries.

[^0]
[^0]:    ${ }^{1}$ Each of the 12 IWISE items are scored O (never), 1 (1-2 months), 2 (some but not all months), or 3 (almost every month) in the last year, for a total score range of $0-36$. The scores $0-2,3-11,12-23$, and 24-36 represent no-to-marginal, low, moderate, and high water insecurity, respectively.. ${ }^{2}$ Young et al BMJ Global Health 2021. More at www.WISEscales.org.
